Countywide Traffic Volume Program

A traffic counting program is conducted annually by the Jefferson County Division of Transportation and Engineering. The program involves the systematic collection of traffic data through the utilization of automatic traffic recorders located on various roadways throughout Jefferson County. Jefferson County conducts traffic counts only on roadways in unincorporated areas. The City's of Arvada, Golden, Lakewood, Westminster, and Wheat Ridge provided traffic data for roadways within their municipal boundaries. The Colorado Department of Transportation and the Denver Regional Council of Governments also provided traffic count data. The traffic data collected through this program helps Jefferson County monitor changing traffic conditions from a year-to year basis and assists with identifying future Capital Projects.

The traffic volume data collected consists of Average Annual Daily Traffic (AADT), Average Weekday Traffic (AWDT), and 24-Hour counts. Annual Average Daily Traffic (AADT) is the total volume of vehicle traffic on a roadway for a given year divided by 365. AWDT is the total traffic volume for an average weekday. AWDT is a representative weekday traffic volume and is not affected by anomalies such as heavy traffic due to a special event or light traffic due to inclement weather. 24-Hour Weekday traffic data are collected at selected locations along roadway segments for a period of 24 hours.

Table 1 provides a list of Jefferson County roadways included in the Countywide Traffic Volume Program, and Table 2, which consists of several pages, outlines the most recent count for each location. Figures 1 illustrates Jefferson County traffic counts.
